

UBT 3000

RPM adapter

The UBT 3000 is the latest type of electronic RPM adapter in the UBT series. The UBT 3000 incorporates a vibration sensor counter and battery / alternator signal counter in one compact and modern device.

Standard features:

- LCD display
- Two robust membrane keys
- Engine vibration sensor
- Battery clamps
- Cigarette lighter plug
- 12 volt dc adaptor
- Oil temperature sensor
- Connection lead for INNOVA or EDA smoke meter.

The UBT 3000 is modern in design, extremely easy to operate and uses advanced technology. In the UBT two different technologies are combined: the battery / alternator ripple voltage and the engine vibration technology. The UBT 3000 actually comprises two electronic RPM counters in a new, compact device.

The measured engine speed is displayed on the integrated LCD display. The UBT 3000 can therefore be used for stand-alone presentation of the engine speed and oil temperature. However, if you use the UBT in conjunction with TEN emission equipment, the information is redirected by the connection lead to your tester, the INNOVA or EDA smoke meter.

The UBT has two membrane keys. They allow you to control the UBT simply and fast. One key to select the measure mode (ripple or vibration) and a key to set the number of cylinders.

TECHNOLOGY WITH THE FUTURE IN MIND
